Frontier Communications Launches Managed Wireless LAN: Fast, Secure and Reliable Wireless Networking for Medium and Enterprise Business

*Integrated End-to-End Wireless LAN Simplifies Customers' Operations with
Mobility, Collaboration, and Corporate IT Service Access*

NORWALK, Conn., Aug. 14, 2019 — Frontier Communications Corporation (NASDAQ: FTR) announced the launch of [Managed Wireless LAN](#) for medium businesses and large enterprises, which combines hosted and managed technology with extensive, one-stop-shop network installation, management, maintenance and analytics. The solution is a key component of Frontier's growing Fully Integrated Managed Solutions Portfolio.

Frontier professionally designs, installs, operates, proactively monitors and manages high-capacity wireless LAN solutions. Combined with Frontier's extensive Ethernet connectivity capabilities, this solution allows a customer's employees, contractors, customers and guests to work and interact virtually anywhere within a network.

[Managed Wireless LAN](#) easily scales as business needs grow, relieving customers of the cost and administrative burden of keeping core technology and software up to date.

"To focus on their core business, or to simplify operations and reduce costs, enterprises are increasingly entrusting key parts of their IT infrastructure to managed network service providers. Frontier's [Managed Wireless LAN](#) combines managed Wi-Fi with additional managed services including broadband, Ethernet, security, installation, support and monitoring to create a uniquely-tailored and reliable solution," said Daniel Peiretti, Senior Vice President of Commercial Product and Marketing for Frontier Communications.

"Frontier is leveraging its expertise in network management and the reliability of the Frontier network to provide a new level of service for our customers, enabling personalization of services without compromising their stability or integrity. Customers can adapt Frontier's solutions to meet their most unique needs — such as integration with IoT applications to reduce energy consumption, use of a softphone and voice over wireless technology to mitigate poor cellular reception, tracking expensive assets at hospitals and manufacturing sites and inventory management in retail and warehousing environments, among a wide variety of innovative uses," added Peiretti.

In addition, Frontier offers 24/7 customer support and robust network backhaul that allows heavy data traffic users to seamlessly collaborate via voice and video. Frontier's Business Intelligence portal, which accompanies our [Managed Wireless LAN](#) solution, allows customers to personalize their splash page to convey user messages (easily updated as desired); control private and guest access; and view usage analytics that provide insight into online activities and consumption patterns. These analytics and insights offer business owners a better understanding of Wi-Fi user profiles from which they can create personalized customer experiences and targeted customer campaigns to accelerate business goals and growth.
